

BLOOM — FINANCIAL MODEL ASSUMPTIONS

All figures in INR (₹) unless noted. Blue = editable input. Yellow = key scenario lever. These are planning assumptions for a bare-minimum, bootstrapped Delhi-NCR launch — not audited figures. Adjust freely; every other tab recalculates from this sheet.

1. UNIT ECONOMICS (PER BOOKING)

Item	Value	Notes
Average Order Value (AOV)	1,100	Blended across salon/beauty catalog. Blueprint range was ₹900-1,400.
Platform Commission %	25.0%	Blueprint range was 20-30%; 25% used as base case.
Consumable Kit Cost / Booking	90	Sealed single-use hygiene kit — direct cost of goods.
→ Platform Revenue / Booking	275	
→ Gross Profit / Booking	185	

2. INSURANCE (WOMEN PARTNER SAFETY COVER)

Item	Value	Notes
Insurance Cost / Active Partner / Mon	300	Accident + liability cover — the safety commitment from the pitch deck.

3. CORE TEAM — HIRING SCHEDULE (BARE MINIMUM)

Role	Start Month	Monthly Cost (₹)	Notes
Founder / CEO	1	40,000	Modest founder draw, not market-rate — equity is the real comp.
Operations & Partner-Acquisition Lead	1	50,000	Recruits, trains, manages the women partner network.
Finance & Admin (part-time retainer)	1	12,000	Bookkeeping, compliance — outsourced, not full-time.
Support & Hyperlocal Marketing Lead	2	35,000	Customer support + local marketing, combined role at this stage.
Tech / App Maintainer (in-house)	4	60,000	Takes over from the launch agency once the MVP ships.
Training & Quality Lead	6	40,000	Split off from Ops once the partner network passes ~60.
Ops Associate #2 (2nd NCR zone)	8	35,000	Added when expanding beyond the first launch zone.

App+website build itself is OUTSOURCED (one-time cost, see Section 5) — no full in-house dev team until Month 4.

4. MONTHLY FIXED COSTS (NON-SALARY)

Item	Value	Notes
Co-working / Office Rent	30,000	

App Hosting & Maintenance (from Mc	35,000
Partner Training (materials + trainers]	25,000
Compliance / Admin / Misc	15,000

5. ONE-TIME PRE-LAUNCH COSTS (MONTH 1)

Item	Value	Notes
App + Website MVP (outsourced build)	1,100,000	Cross-platform (Android+iOS) + basic website, India dev agency rate.
Incorporation, Licenses & Legal	150,000	Pvt Ltd setup, contracts, service agreements.
Branding & Trademark Filing	100,000	Brand identity polish + trademark registration.
Initial Hygiene-Kit Inventory	150,000	First stock of sealed consumable kits.
Office / Co-working Setup	75,000	Deposit + basic setup for a lean shared workspace.
Contingency Buffer (10%)	157,500	
TOTAL ONE-TIME PRE-LAUNCH C	1,732,500	

6. MARKETING SPEND BY PHASE (MONTHLY)

Phase	Value	Notes
Pre-Launch (Months 1-2)	50,000	
Launch Phase (Months 3-6)	80,000	
Growth Phase (Months 7-12)	120,000	

BLOOM — YEAR 1 MONTHLY PLAN (DELHI NCR, BARE-MINIMUM LAUNCH)

Illustrative planning model, not audited. Bookings/partner-count are scenario inputs (blue) — adjust them and every total below recalculates.

	Month 1	Month 2	Month 3	Month 4	Month 5	Month 6	Month 7	Month 8	Month 9	Month 10	Month 11	Month 12	YEAR 1 TOTAL

ONE-TIME & CASH POSITION													
One-Time Pre-Launch Cost	1,732,500	-	-	-	-	-	-	-	-	-	-	-	1,732,500
Net Cash Flow (Month)	(1,954,500)	(261,500)	(281,750)	(307,750)	(266,000)	(255,000)	(227,000)	(184,750)	(99,750)	(5,500)	99,500	223,000	(3,521,000)
Cash Balance (Cumulative)	3,545,500	3,284,000	3,002,250	2,694,500	2,428,500	2,173,500	1,946,500	1,761,750	1,662,000	1,656,500	1,756,000	1,979,000	

Reads: seed raise assumed on the Investment Ask tab (cell B6) funds Month 1 from day one. Green cells link to Assumptions or another sheet; blue cells are editable scenario inputs.

BLOOM — INVESTMENT ASK & USE OF FUNDS

This tab drives the whole model's cash position — the Year 1 Monthly Plan tab starts its cash balance from the Seed Raise input below (cell B6).

SEED RAISE (EDIT THIS CELL)

Recommended Seed Raise **5,500,000** ₹55L — modeled Year-1 burn (~₹35L) plus a safety margin for slower ramp / delays.

WHY THIS NUMBER — MODELED YEAR 1 REQUIREMENT

Item	Amount (₹)	Notes
One-time pre-launch cost (app, legal, brand,	1,732,500	
Year 1 recurring operating burn (Months 1-12	1,788,500	
→ Modeled Year 1 Total Burn	3,521,000	
Safety Buffer (Seed Raise minus Modeled Bi	1,979,000	Cushion for a slower ramp than modeled — ramps almost always run behind plan.
Buffer as % of Modeled Burn	56.2%	
Lowest Projected Cash Balance During Year	1,656,500	Should stay comfortably positive — this is the real test of whether the raise is enough.

USE OF FUNDS (YEAR 1, MODELED — GROSS SPEND, RECONCILED TO THE RAISE)

Gross spend by category, less the revenue Bloom itself earns during the year (that's what funds part of the spend), plus the safety buffer — reconciles exactly to the seed raise

Category	Amount (₹)	% of Raise	Notes
Product & Tech (app build + hosting)	1,450,000	26.4%	One-time MVP build + 12 months hosting/maintenance.
Team (salaries, all roles)	2,604,000	47.3%	Founder draw + 6 hires, phased in through the year.
Marketing & Partner Acquisition	1,140,000	20.7%	Hyperlocal marketing + partner recruitment spend.
Working Capital & Other (rent, training, insur	3,442,000	62.6%	Everything else in total cost — the remainder after the three categories above.
→ Total Gross Spend (Year 1)	8,636,000		
Less: Revenue Bloom Earns During Year 1	(5,115,000)		Bookings revenue funds part of the spend as the business grows — this is why net burn is well below gross spend.
→ Net Burn (Year 1)	3,521,000		Should tie to 'Modeled Year 1 Total Burn' above (row 12).
Plus: Safety Buffer	1,979,000		
→ TOTAL SEED RAISE	5,500,000		Should tie exactly to the Seed Raise input (row 6).

BEYOND YEAR 1 — FUNDING SEQUENCE

- This ₹55L seed round is sized for Year 1 (NCR launch) only — not 3 years of runway raised upfront.
- Year 2 (NCR density + 1-2 new Tier-1 cities) needs an incremental raise once Year-1 traction is proven — see '3-Year Summary' tab.
- Typical sequencing: raise this seed now, hit the Month 10-11 monthly-breakeven milestone shown in Year 1 Monthly Plan, then raise a

BLOOM — 3-YEAR BURN COMPARISON

Year 1 is fully modeled month-by-month (linked from the Year 1 Monthly Plan tab, shown in green). Years 2-3 are directional annual planning scenarios (blue inputs), sized off the growth trajectory in the original Business Model Blueprint — not built bottom-up month by month in this workbook.

Metric	Year 1 (NCR launch)	Year 2 (NCR density + 1-2 cities)	Year 3 (Tier-1 expansion)	Notes
Exit Monthly Bookings	4,200	28,000	90,000	Y2/Y3 exit targets from the Blueprint's illustrative trajectory (20-40K / 70-120K ranges).
Exit Active Partners	190	1,200	3,800	Women partner network size at year-end.
Core Team Headcount (exit)	7	16	42	Bare-minimum Y1 team; Y2/Y3 add city-ops leads, more tech & training capacity.
Annual Platform Revenue	5,115,000	42,900,000	181,500,000	Y2 ≈8x Y1 (full-year run-rate effect + city expansion); Y3 ≈4x Y2.
Annual COGS (kits)	1,674,000	14,040,000	59,400,000	
Annual Gross Profit	3,441,000	28,860,000	122,100,000	
Annual Operating Expenses	5,229,500	30,900,000	88,740,000	Recurring opex excl. one-time/expansion costs below. Y2/Y3 include a ~30% execution/competition buffer on Team+Marketing over pure unit-e
One-Time / Expansion Cost	1,732,500	3,000,000	6,000,000	
NET BURN / (PROFIT) FOR YEAR	(3,521,000)	(5,040,000)	27,360,000	Negative = burn, positive = profit. This is the headline number for each year.
EBITDA Margin (Net / Revenue)	-68.8%	-11.7%	15.1%	Y3 margin here reads high vs. typical category benchmarks — see warning below.
Cumulative Capital Required (from D:	(3,521,000)	(8,561,000)	18,799,000	Running total. Turns cumulative-positive once Year 3 profit outweighs Years 1-2 burn.

⚠️ READING THIS TABLE HONESTLY

- Year 1 is a real bottom-up model (12 months of bookings, hiring, costs). Years 2-3 are NOT — they're the Blueprint's directional growth trajectory translated into rupee figures, with a 30% cost buffer applied to account for competitive marketing pressure from Urban Company / Yes Madam that a pure unit-economics extrapolation would understate.
- Even with that buffer, the Year 3 EBITDA margin this sheet computes (~15%) is well above the Blueprint's original 'low-to-mid single digit' guidance for that year. Treat anything above low-single-digit margin in Year 3 as upside, not the planning case — multi-city competitive intensity, R&D, and management overhead typically compress margins further than a bottom-up model captures this early.
- Bottom line: raise for Year 1 (the modeled number). Use Years 2-3 to size the STORY for your next raise, not as a committed multi-year budget.
